

Elements Docket makes your factory smarter

Simple software that adds live visibility and increased traceability to your production, making it easier for your teams to instantly access the information they need.

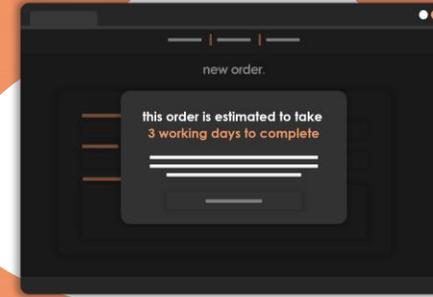

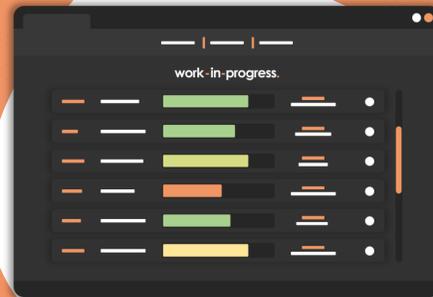

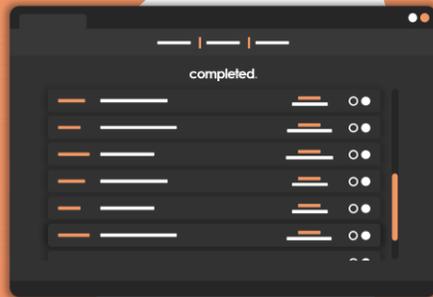

Docket works with your ERP

(or can be used as a stand-alone ERP lite solution)

* Inventory software coming Summer 2021

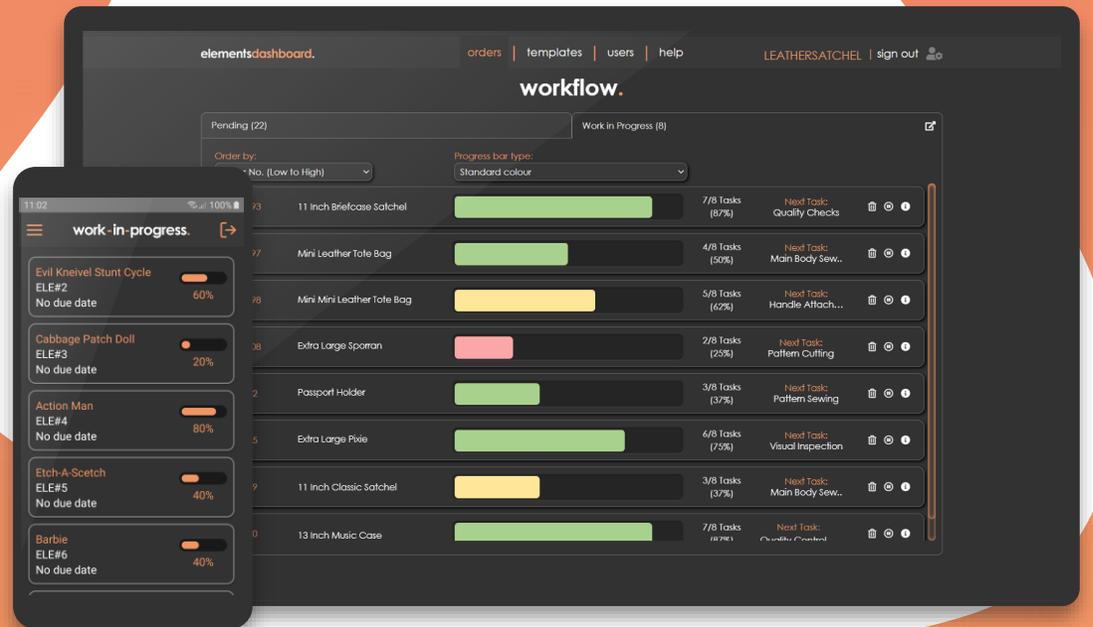

Giving you a quick and easy way to access your production past, present, and future.

Instant access to live production

Our live workflow screen give teams across your business a real-time view of production. It's even colourised to help you quickly identify work that is slipping behind so you can get it back on task.

Access to this information not only helps your production team, but also sales and accounts teams, enabling them to quickly provide order updates for customers.

Saving you time from Shop Floor to Top Floor

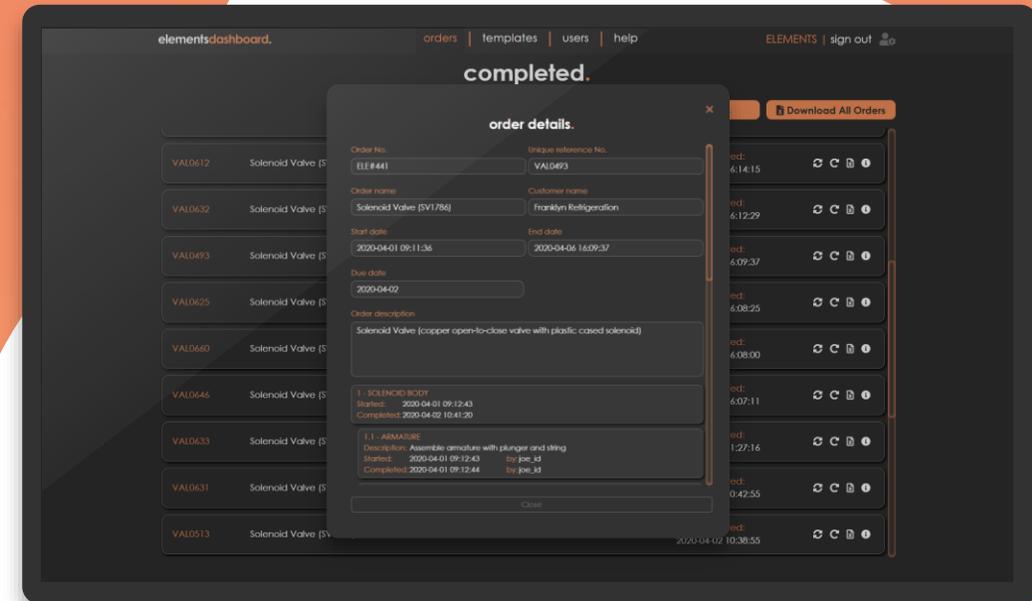

"Using Elements Docket has increased our visibility and reporting on key engineering projects, saving us several hours of management time every week"

Making it easier to store and retrieve past orders.

Elements Docket securely stores all order histories which can be retrieved at any time, from anywhere.

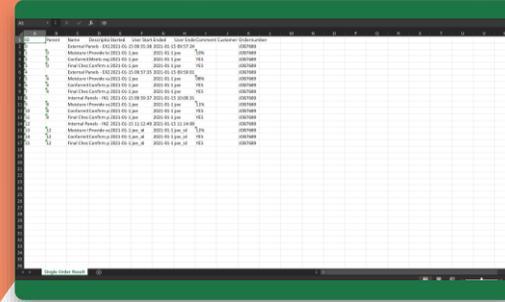

You can even give your ISO9001 assessor a temporary account enabling them to easily access the information they need to complete their audit.

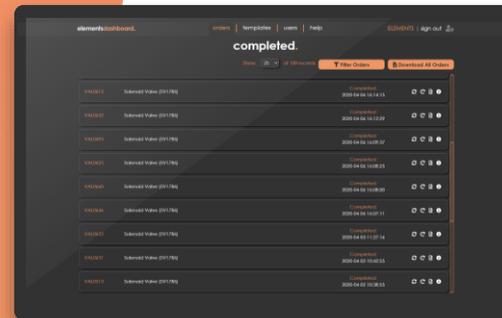

Helping you to make better decisions.

All data captured in Elements Docket can be exported to Excel, or managed in other software packages such as Power BI, enabling you to learn from your data and improve how you operate.

You can use this data to improve how you cost and plan your production.

Item	Quantity	Date
1	100	2023-01-01
2	200	2023-01-02
3	300	2023-01-03
4	400	2023-01-04
5	500	2023-01-05

10010	Element Value (20179)	Completed	2023-04-04 11:41:13

10% extra capacity

Using Elements Docket, Carpenter Additive were able to identify accurate order timings, enabling them to plan production more efficiently, freeing up an extra 28 working days per year.

A better way to track orders

We use contactless technology for order tracking, making recording jobs as easy as paying for a coffee. Unlike RFID, QR or Bar Code, NFC stickers/cards can be read and written using just a phone, so you don't need to buy separate printers and reader devices.

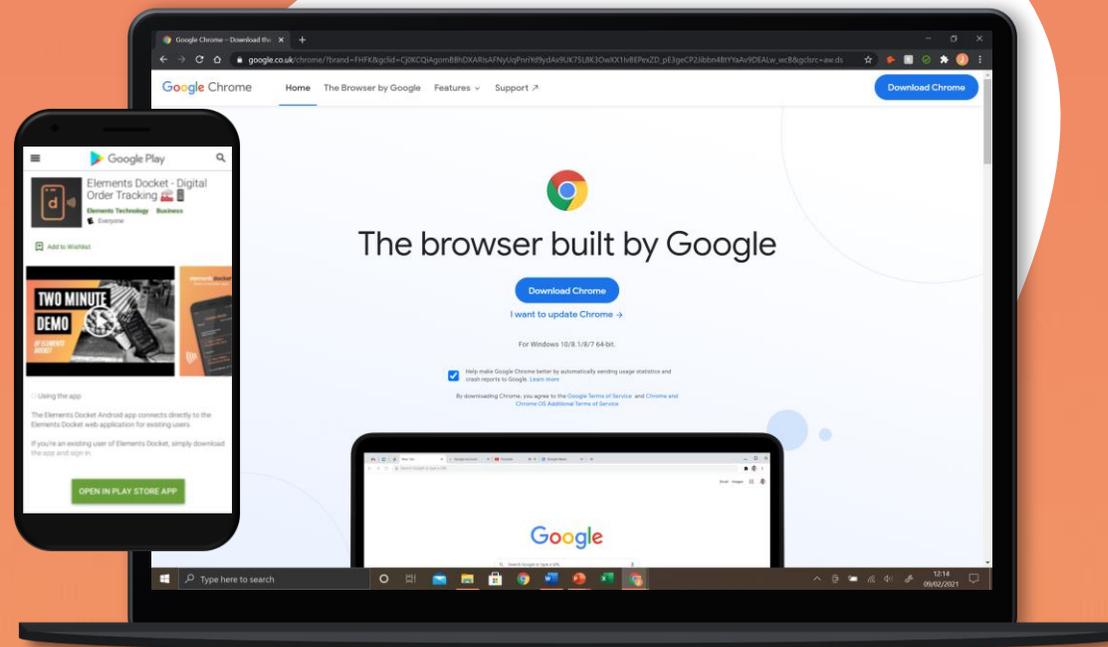

You can even take photos, allowing you to capture evidence of checks, tests and item condition.

All you need is a phone and a computer

No need to integrate or install any complicated technologies, Elements Docket works with consumer technologies: an Android mobile app that can be installed on your phone, and a web dashboard that operates on Google Chrome.

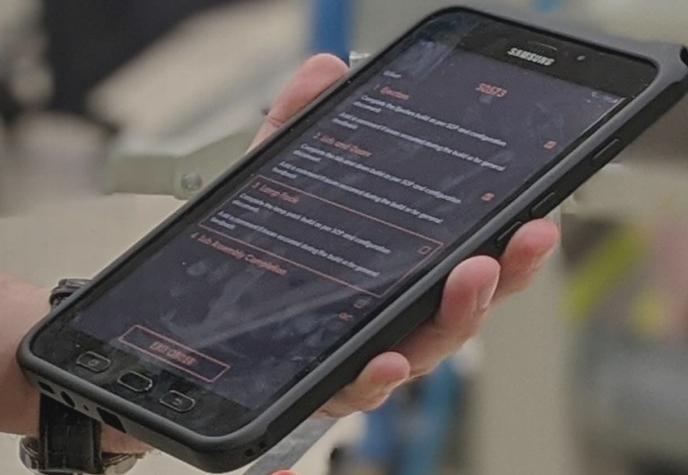

Download the app for free from Google Play Store.

We'll help you get up and running

"the Elements Technology team have been fantastic in supporting our efforts towards creating a more digitally visible and controlled shop floor."

Coming Late 2021: A Smart Inventory Software Solution

We have started work on a new software solution to help you to keep track of your stock and inventory, alerting you to when stock needs to be re-ordered; and working with your financial package to make costing jobs and orders clearer and more accurate.

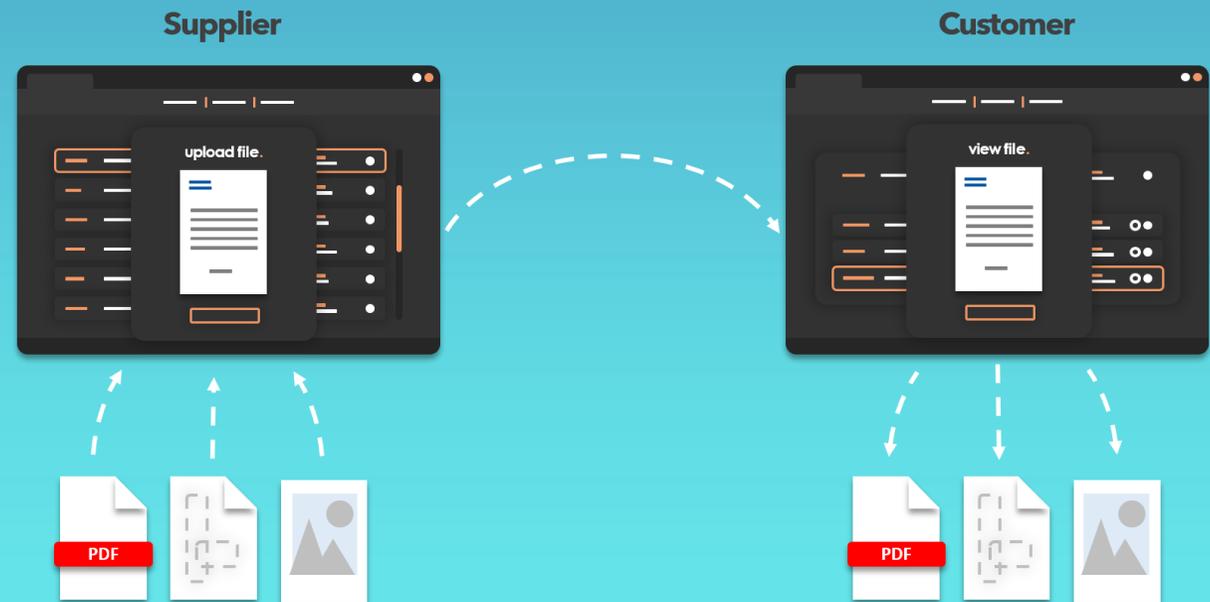

Coming Early 2022: A Smart Supply Chain Solution

In March 2021 we will be starting a six month project with Pathfindr, the AMRC and Produmax to develop a suite of supply chain solutions to increase the accessibility and transfer of information between suppliers and customers.
